

## Vitamine B17 (laetrile) Cancer Cure Cover Up

donderdag, 8 maart 2007

Cancer is big business and knowledge claims on any treatments.....

Cancer is big business and knowledge claims on any treatments that earn money and, conversely, on any treatments that do not earn money for the drug companies, are never neutral. Dr Ralph Moss served as the Assistant Director of Public Affairs at America's most famous cancer research institution, Memorial Sloan Kettering, in Manhattan. He knows the cancer industry inside out. Hear what he has to say and judge for yourself the quality of the evidence against the effectiveness of Vitamin B17:

Moss: "Shortly after I went to work [at the Sloan Kettering Cancer Institute], I visited the elderly Japanese scientist, Kanematsu Sugiura, who astonished me when he told me he was working on Laetrile (B17). At the time it was the most controversial thing in cancer, reputed to be a cure for cancer. We in Public Affairs were giving out statements that laetrile was worthless, it was quackery, and that people should not abandon proven therapies. I was astonished that our most distinguished scientist would be bothering with something like this, and I said, "Why are you doing this if it doesn't work?" He took down his lab books and showed me that in fact Laetrile was dramatically effective in stopping the spread of cancer."

Lee: "So this is verified, that laetrile can have this positive effect?"

Moss: "We were finding this and yet we in Public Affairs were told to issue statements to the exact opposite of what we were finding scientifically." [23]

Unable to sit on this information, Moss later called a press conference of his own and, before a battery of reporters and cameramen, charged that Sloan-Kettering officials had engineered a massive cover-up. He provided all the supporting documents and named all the names necessary to validate his case. The following day he was fired for 'failing to carry out his most basic job responsibilities'. [24]

Similarly, in his book 'World Without Cancer', cancer industry researcher Edward Griffin noted: "Every Laetrile study had been tarnished with the same kind of scientific ineptitude, bias and outright deception... Some of these studies openly admitted evidence of anti-cancer effect but hastened to attribute this effect to other causes. Some were toxicity studies only, which means that they weren't trying to see if Laetrile was effective, but merely to determine how much of it was required to kill the patient." [24a]

The 'evidence' supporting John Diamond's claim that Vitamin B17 is useless and even dangerous is available in abundance in all of the major cancer institutions today. Well of course it is! We're in the merchant's house, don't forget. As Pat Rattigan, author of 'The Cancer Business' said, "The threat to the cancer business from effective therapies was taken very seriously from the beginning. By the 1940's the Syndicate had 300,000 names on its 'quack' files. Vitamin B17, being a unique threat due to its simplicity, attracted more concentrated attacks than all the other treatments put together: fraudulent test reports; hired, banner-carrying pickets outside clinics; rigged juries; newspaper character assassinations; dismissal of heretic employees, etc. The FDA, orchestrating the onslaught, sent out 10,000 posters and hundreds of thousands of leaflets warning about the dangers of the toxicity of the non-toxic substance. Earlier, a Congressional Accounting Office had found that 350 FDA employees had shares in, or had refused to declare an interest in, the pharmaceutical industry."

The American Food and Drug Administration issued one such story about the death of an eleven month old girl, supposedly from cyanide poisoning due to her apparently swallowing her father's Vitamin B17 tablets. Cancer specialist and B17 advocate Dr Harold Manner takes up the story:

'...I was lecturing in Buffalo, New York and...after I had made some strong statements - a man stood up and said "Dr. Manner, how in the world can you make statements like that when the FDA is making these other statements?" I reiterated that the FDA statements were lies. 'He said, "Look at this little girl in upstate New York, she took her father's Laetrile tablets and died of cyanide poisoning." Just then a little lady stood up: "Dr. Manner let me answer that question. I think I am entitled to because I am that little baby's mother. That baby never touched her father's Laetrile tablets. The doctor, knowing the father was on Laetrile, marked down "possible cyanide poisoning". At the hospital they used a cyanide antidote and it was the antidote that killed the child. And yet that statement will continue to appear even though they know it is a lie." [24b]

The scare stories always focus on the minute amounts of naturally occurring cyanide found in VitaminB17. But no mention is made in any of these stories of the wondrous mechanism governing the release of this cyanide. No harm is done to the person eating this vitamin ( if that were the case, we have consumed enough apricots, apples, peaches and cherries etc containing B17 to have finished us off long ago.) The cyanide is released only when cancerous cells are recognised by their high glucosidase content. B17 cyanide attacks cancer cells specifically. No large amounts of glucosidase detected means no cyanide release. Rest assured, there is no evidence that vitamin B17 can kill...

Moss: "About 630,000 people die every year of cancer in the US, and it really is an epidemic disease. We have got a tremendous industry. Every one of those people who is getting cancer and dying of it is going to be treated, and these treatments are extremely expensive. Chemo is tens of thousands, sometimes hundreds of thousands of dollars. A bone marrow transplant, which is basically another way of giving chemotherapy, or radiation, can run to about \$150,000 per person, and is almost never effective. It kills about 25% of the patients."

Lee: "Why carry on doing it?"

Moss: " Because of the money, which is tremendous." [25]

When we understand the amounts of money involved, we can begin to understand the in-house desire to sustain a 'fact-creating' process in support of conventional treatment. Conventional cancer treatment and research is a licence to print money. Most definitely, conventional interested parties and institutions have colluded in a shameful anti-Vitamin B17 'fact-creating' process, which in turn has surely led to the early and even unnecessary deaths of thousands upon thousands of people.

peopleagainstcancer

"Most cancer patients in this country die of chemotherapy. Chemotherapy does not eliminate breast, colon, or lung cancers. This fact has been documented for over a decade, yet doctors still use chemotherapy for these tumors." - Allen Levin, MD UCSF The Healing of Cancer

We have many case histories of people that have been helped by

Laetrile. Both Alicia Buttons and Mary Henderson were terminal with oral pharyngeal cancer that has a mortality rate of 98-99 percent even in early diagnosis. Both made remarkable recoveries with Laetrile under the guidance of Dr. Hans Nieper in Germany
